

# LIFE SCIENCE

- Do you love learning about the human body and diseases?
- Does the origin of life and mass extinction interest you?
- Are you concerned about the environment?
- Are you fascinated by DNA and inheritance?
- Do careers in Medicine, Zoology, Botany, Nature Conservation, Veterinary Science, Sports Psychology, Nutrition, Marine Biology, Genetic Engineering, Biotechnology and Forensic Science excite you?

Then Life Science is possibly a good choice. But remember – it is hard work, you must be able to study an enormous amount of theory and be able to memorize long biological terms as well as interpret the concepts you have learnt.

The Matric exams and formal tasks are difficult, aimed at potential medical students and the study of Life Science does include some Mathematics and Science work. Most of the careers linked to life sciences require that you have Mathematics as well as Physical Science as subject choices. So if you feel you can cope with the above, we welcome you to our department, where we are fully equipped for you to do hands-on practical work to reinforce all theory being studied.
